

Paladin Data Systems Celebrates Its 20th Anniversary

Company marks 20 years of developing innovative cloud-based software solutions

Poulsbo, WA (PRWEB) December 18, 2014

Poulsbo-based Paladin Data Systems, a leading developer of cloud-based software products serving a widerange of government agencies in all 50 states, celebrates its 20th anniversary this month. Since 1994, Paladin has provided award-winning software products, services, and support. The company was co-founded 20 years ago by Jim Nall, Robert (Bob) Johnston, Gary Macy, and Dave Streifel, following their respective 15-year careers at Lockheed Martin.

Two decades of experience have transformed Paladin from a new consulting venture with big ideas into a successful software products company whose customers span a diverse client base. Winner of numerous prestigious awards that include Top DoD Program Award, Paladin Data Systems serves a wide-range of government agencies in all 50 states and 6 territories. Paladin also provides software services such as interface development, implementation, database administration, and project management for numerous industries in both the public and private sector.

“Working with a great team of professionals and taking on dynamic, challenging projects has made the past twenty years go by in a blink. Paladin has been fortunate in hiring wonderfully talented people, and we’ve accomplished what many folks thought was impossible. Often, private companies don’t survive one year, much less twenty, especially through the roller-coaster economics of the past decade. We’ve got excellent products, great people, and solid processes, so Paladin has our bases covered, and we’re poised for growth, developing more exciting products as part of our future,” said Jim Nall, Paladin Data Systems CEO and Co-Founder.

Paladin employs certified Oracle and Microsoft architects, developers, database administrators, and maintains a gold level partnership with both Oracle and Microsoft, as well as partnerships with IBM and Amazon for cloudbased solutions.
